Comments:

All four Burdekin mills commenced crushing on the scheduled dates this week, processing just over 164,000 tonnes for week one of the 2023 season.

The dry weather has provided favourable harvesting conditions.

The average weekly CCS was 12.76 which, while above budget, was suppressed a little due to the proportion of standover cane being delivered.

The highest CCS sample of 16.5 was from a rake of Q183-P in the Clare productivity district.

The season start has been a good one given the scale of the capital and maintenance program and the compressed timeframe in which it was delivered.

Cane trains are now operating around the clock, across our cane rail network. Please remember to use your train brain and always give way to cane trains.
