# The power of Bio Dunder

Bio Dunder is much more than your average fertiliser.

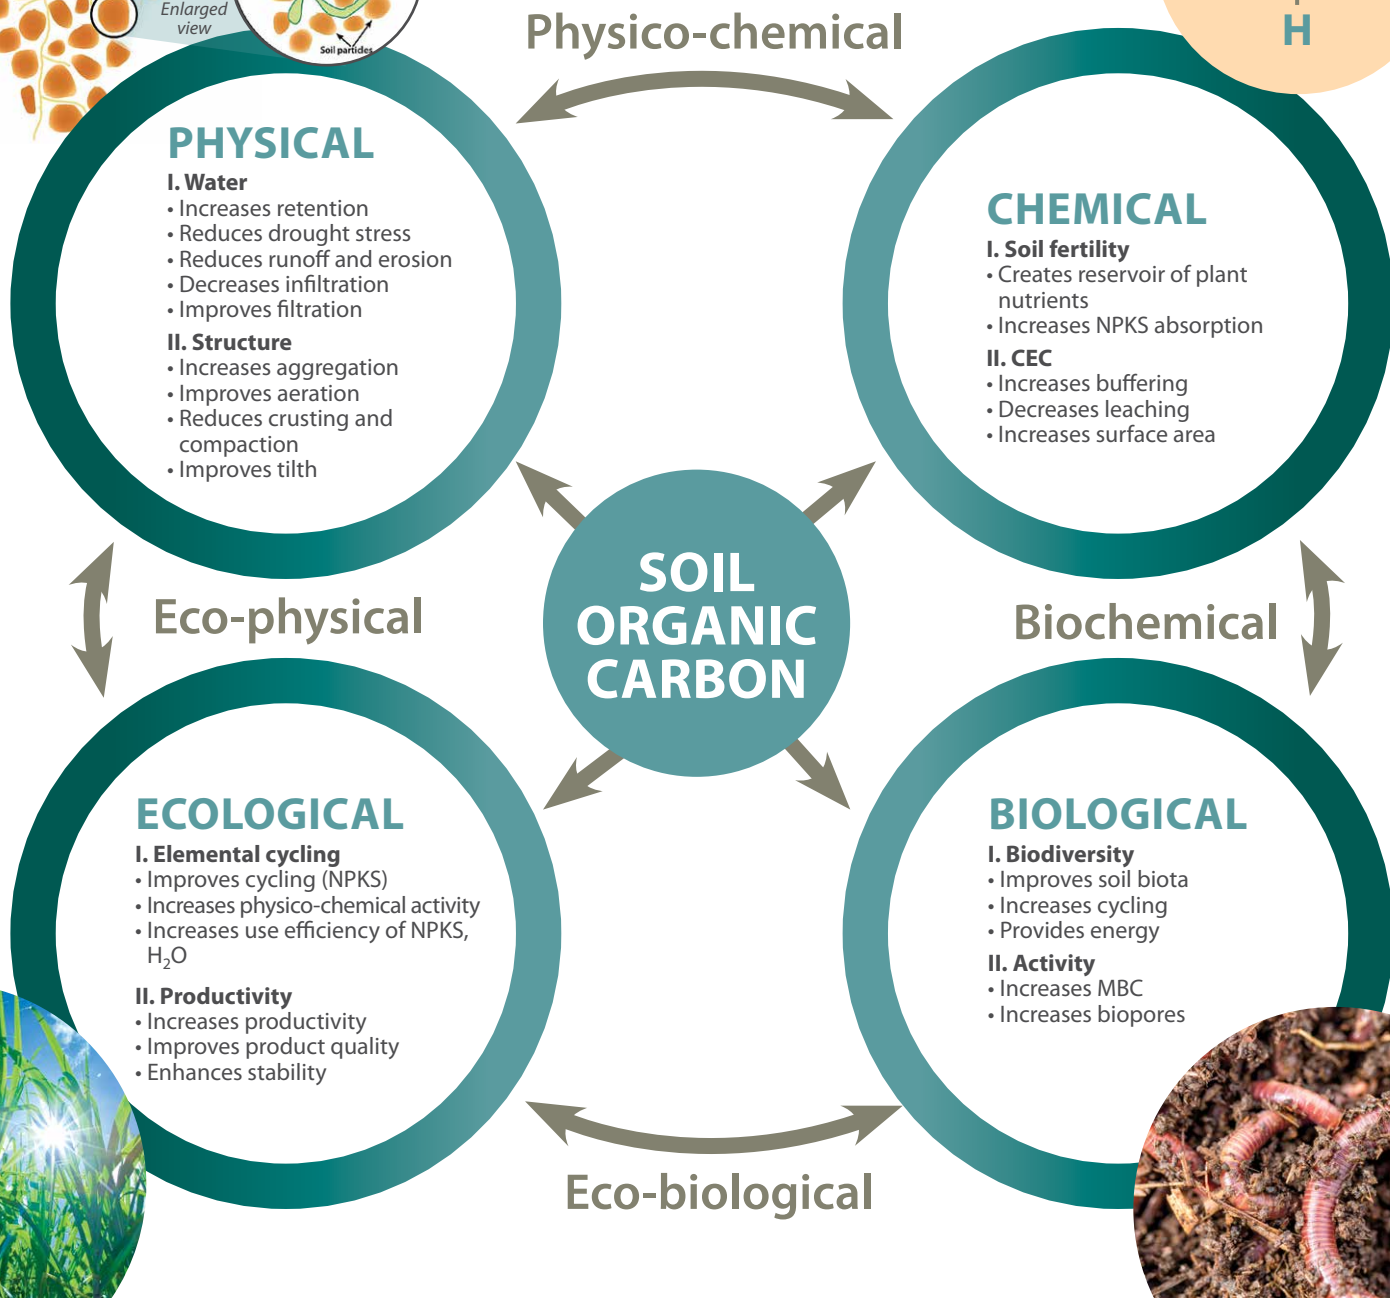

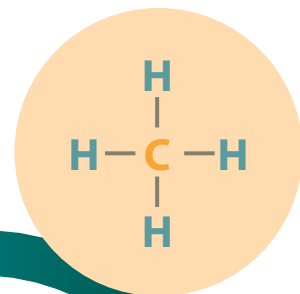

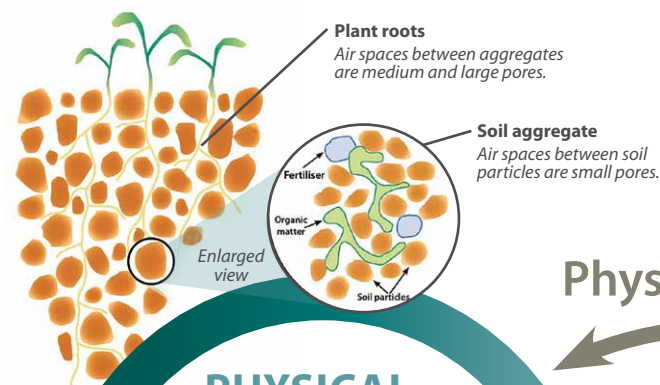

It's a plant-based liquid fertiliser with 9% organic carbon, plus yeast and unfermented complex sugars - all working together to promote better soil health.

Bio Dunder liquid fertilisers contain a comprehensive mix of nitrogen, phosphorus, potassium and sulphur, matched to your soil test results.

Bio Dunder provides an average of 300-400kg/ha of organic carbon, as well as calcium, magnesium, and trace amounts of copper, zinc, iron and manganese.

Organic carbon is a powerful ally. It works to release nutrients from the soil so they can be taken up by the plant. This means your plant can get more from less.

## Convenient

Leave the fertilising to us and free up time for other jobs. Bio Dunder liquid fertilisers are a safe and easy option. They're precision applied by experienced contractors so your crop gets the nutrition it needs, fast.

## Reef compliant

You can be confident you're meeting the new Reef Regulations with Bio Dunder. Our liquid fertilisers are applied under pressure to the crop row and there's a large range of products to match your soil test results.

## Sustainable

Bio Dunder liquid fertilisers are derived from North Queensland sugarcane and made in Sarina. A co-product of the molasses fermentation process, our fertilisers come from the crop and go back into the crop.
