Crop forecast	4.2M	

	This week	Season to date
District CCS	12.17	12.28

Cane variety performance for region

Variety	%	CCS	Variety	%	CCS
Q208	28.5	12.31	KQ228	3.3	12.08
Q253	16.0	11.47	Q200	3.1	12.38
Q232	7.0	12.26	Q242	2.7	10.73
Q250	5.5	12.61	Q240	2.6	12.67
SRA14	3.5	11.69	Q183	2.1	13.37

Comments:

Persistent showers throughout the Herbert region brought crushing to a stop at both factories early in the week.

As a result, crushing throughput was limited to 37,691 tonnes of cane for the week.

CCS levels were slightly suppressed due to the wet conditions, with the weekly average at 12.17 units.

Both factories used the forced downtime to bring forward scheduled maintenance.

Improved field conditions late in the week enabled some harvesting to recommence on Saturday.

The public is reminded to stay clear of cane rail infrastructure and always give way to cane trains.
